# KDM7 (C) Antibody, Rabbit Polyclonal

Cat#: R0234-2 Lot#: Refer to vial
Quantity: 100 ul Application: WB

Predicted | Observed MW: 107 | 125 kDa Uniprot ID: Q6ZMT4

### **Background:**

Lysine-specific histone demethylase 7 (KDM7) is a histone demethylase required for brain development. KDM7 specifically demethylates dimethylated 'Lys-9' and 'Lys-27' (H3K9me2 and H3K27me2, respectively) of histone H3 and monomethylated histone H4 'Lys-20' residue (H4K20Me1), thereby playing a central role in histone code. KDM7 specifically binds trimethylated 'Lys-4' of histone H3 (H3K4me3), affecting histone demethylase specificity: in presence of H3K4me3, it has no demethylase activity toward H3K9me2, while it has high activity toward H3K27me2.

#### **Other Names:**

Lysine-specific demethylase 7, JmjC domain-containing histone demethylation protein 1D. JHDM1D, KIAA1718

### **Source and Purity:**

Rabbit polyclonal antibodies were produced by immunizing animals with a GST-fusion protein containing the C-terminal region of human KDM7. Antibodies were purified by affinity purification using immunogen.

### **Storage Buffer and Condition:**

Supplied in 1 x PBS (pH 7.4), 100 ug/ml BSA, 40% Glycerol, 0.01% NaN<sub>3</sub>. Store at -20 °C. Stable for 6 months from date of receipt.

#### **Species Specificity:**

Human

## **Tested Applications:**

WB: 1:500-1:1,000 (detect endogenous protein\*)

\*: The apparent protein size on WB may be different from the calculated M.W. due to modifications.
