TET3 (C3) Antibody, Rabbit Polyclonal

Cat#: R1092-3

Quantity: 100 ul

Predicted M.W.: 179 kDa

Lot#: Refer to vial

Application: WB

Uniprot ID: O43151

Background:

TET3 is a methylcytosine dioxygenase that catalyzes the conversion of methylcytosine (5mC) to 5-hydroxymethylcytosine (5hmC), and may play a role in DNA demethylation. TET3 is a member of the ten-eleven translocation (TET) gene family.

Other Names:

Methylcytosine dioxygenase TET3, KIAA0401

Source and Purity:

Rabbit polyclonal antibodies were produced by immunizing animals with a GST-fusion protein containing the C-terminal region of human TET3. Antibodies were purified by affinity purification using immunogen.

Storage Buffer and Condition:

Supplied in 1 x PBS (pH 7.4), 100 ug/ml BSA, 40% Glycerol, 0.01% NaN₃. Store at -20 °C. Stable for 6 months from date of receipt.

Species Specificity:

Human, Mouse

Tested Applications:

WB: 1:1,000-1:3,000

*: The apparent protein size on WB may be different from the calculated M.W. due to modifications.

Product Data:

Fig 1. Western blot of total cell extracts from human 293 T cells transfected with the empty vector, or Flag-tagged murine TET1, TET2 or TET3; using indicated Abs at RT for 2h, indicating that anti-TET3 (C3) (R1092-3) antibody does not cross-react with TET1 or TET2 under this condition.
