EXT1 (N) Antibody, Rabbit Polyclonal

Cat#: R2711-1

Quantity: 100 ul

Predicted | Observed M.W.: 86 kDa

Lot#: Refer to vial

Application: WB

Uniprot ID: Q16394

Background:

Exostosin-1 (EXT1) is an endoplasmic reticulum-resident type II transmembrane glycosyltransferase involved in the chain elongation step of heparan sulfate biosynthesis. EXT1 forms a homo/hetero-oligomeric complex with EXT2. The EXT1/EXT2 complex possesses substantially higher glycosyltransferase activity than EXT1 or EXT2 alone. EXT1 appears to be a tumor suppressor. Mutations in the EXT1 gene cause the type I form of multiple exostoses.

Other Names:

Exostosin-1, Glucuronosyl-N-acetylglucosaminyl-proteoglycan/N-acetylglucosaminyl-proteoglycan 4-alpha-N-acetylglucosaminyltransferase, Multiple exostoses protein 1, Putative tumor suppressor protein EXT1, LGCR, LGS, ttv

Source and Purity:

Rabbit polyclonal antibodies were produced by immunizing animals with a GST-fusion protein containing the N-terminal region of human EXT1. Antibodies were purified by affinity purification using immunogen.

Storage Buffer and Condition:

Supplied in 1 x PBS (pH 7.4), 100 ug/ml BSA, 40% Glycerol, 0.01% NaN₃. Store at -20 °C. Stable for 6 months from date of receipt.

Species Specificity:

Human

Tested Applications:

WB: 1:1,000-1:3,000 (detect endogenous protein*)

*: The apparent protein size on WB may be different from the calculated M.W. due to modifications.

Product Data:

Fig 1. Western blot of total cell extracts from (A) human HeLa, (B, C) human Jurkat; using 2 independent Abs against 2 distinct regions of human EXT1 at RT for 2 h.
